

B1
Cont.

a housing capable of removably holding a removable storage media, said removable storage media being suitable for use in a host device;

remote control circuitry supported by said housing, said remote control circuitry comprising a signal transmitter capable of transmitting a wireless signal, said signal controlling information displayed by said host device; and

a button physically attached to said housing, said button [comprising] operatively coupled to a switch; [and]

a switch output line connecting said switch to said remote control circuitry; and

a label formed of at least one of text and graphic content, said label being located on one of said housing and said button, said label being visually associated with said button, said label being indicative of specific information;

wherein said specific information is retrieved from said removable storage media and displayed by the host device in response to said wireless signal.

4 38. (Amended) The remote control of Claim 35 wherein said removable storage media is a flexible disk.

5 39. (Amended) The remote control of Claim 35 wherein said removable storage media is an optical disk.

6 40. (Amended) The remote control of Claim 35 wherein said removable storage media is a game cartridge.

7 41. (Amended) The remote control of Claim 35 [further comprising] wherein said storage media is removably mounted in

B2
Cont.

said housing, and wherein said storage media is encoded with [electronic content, said housing having human understandable content, said electronic content] said specific information, said specific information having a representative association with said [human understandable content of said housing] label.

10 11 (Amended) The remote control of Claim '41 wherein said storage media is encoded with an application, said application being capable of causing [a] said host device to respond to a [button] code received from said remote control.

11 10 (Amended) The remote control of Claim [41] 41 wherein said application is capable of causing [a] the host device to display a selection on receipt of said [button] code.

13 13 (Amended) A remote control for remotely controlling a display of information by a host device, said remote control comprising:

a housing [comprising data selecting content, said data selecting content having a data selecting association with electronic content accessible by said host device];

remote control circuitry supported by said housing, said remote control circuitry comprising a signal transmitter capable of transmitting a wireless signal, said signal controlling [said] information displayed by the host device; and

a [data] button physically attached to said housing, [said data button having a visual association with said data selecting content of said housing,] said [data] button [comprising] operatively coupled to a switch; [and]

a switch output line connecting said switch to said remote control circuitry; and

a label formed of at least one of text and graphic content, said label being located on one of said housing and said button, said label being visually associated with said button, said label being indicative of specific information:

wherein said specific information is retrieved from a source external to said host device for display by the host device in response to said wireless signal.

Please cancel Claim 47.

14 ~~48~~. (Amended) The remote control of Claim [47] ~~46~~ wherein [said associated electronic content has a remote electronic association with] said signal carries a code in response to operation of said [data] button, said code identifying at least partially said specific information.

16 ~~49~~. (Amended) The remote control of Claim ~~46~~ wherein:

 said housing comprises a holder [capable of removably holding]; and

 a removable storage media is mounted in said holder, said removable storage media being encoded with at least said specific information indicated by said label, wherein said removable storage media is the external source used by the host device when inserted into the host device.

Please cancel Claim 50.

19 ~~52~~. (Amended) The remote control of Claim ~~46~~ wherein said [housing has the shape of a globe and said data selecting content] label comprises graphic content [representative of continents].

SER. NO. 08/550,976

20
53. (Amended) The remote control of Claim 46 wherein said [data selecting content] label comprises [content] text [representative of a component of the solar system].

21
54. (Amended) The remote control of Claim 53 wherein said housing comprises a holder [capable of holding]; and
a removable storage media mounted in said holder, said storage media being encoded with at least said specific information indicated by said label.

B5
cont.
Please cancel Claim 55.

24
57. (Amended) A remote control for remotely controlling a display of information by a host device, said remote control comprising:

a housing [for a storage media, said housing comprising human understandable content] having a label Content indicative of specific information to be displayed by said host device, said housing being capable of removably holding a storage media; and

remote control circuitry supported by said housing, wherein on operation said remote control circuitry transmits a wireless signal to control the display by the host device.

25
58. (Amended) The remote control of Claim 57 further comprising a storage media encoded with said specific information Content and mounted in said housing.

29
29. (Amended) A remote control for remotely controlling a display of information by a host device, said remote control comprising:

a housing [, said housing comprising data selecting content];

remote control circuitry supported by said housing;
and

a [data] button connected to said remote control circuitry, said [data] button being physically attached to said housing, said [data] button having a visual association with [said data selecting content] a label formed on one of said housing and said button, said label being indicative of specific information from an external source to be displayed by the host device, *content*

wherein said remote control circuitry transmits a wireless signal to control the display by the host device in response to operation of said button. *of Said Specific Information Content*

Please add the following new claims 101-120.

22
101. (New) The remote control of Claim *46* wherein said label describes said specific information.

15
102. (New) The remote control of Claim *46* wherein said code uniquely identifies said specific information.

26
103. (New) The remote control of Claim *27* wherein said housing includes a button.

27
104. (New) The remote control of Claim *103* wherein said housing includes a cardboard piece.

28 105. (New) The remote control of Claim ~~103~~ wherein said housing is at least approximately spherical.

30 106. (New) The remote control of Claim ~~29~~ wherein:

said housing includes a printed publication having at least one touch sensitive region; and

said label is formed by ink printed on said touch sensitive region.

12 107. (New) The remote control of Claim ~~35~~ wherein said removable storage media has the form of a card.

17 108. (New) The remote control of Claim ~~49~~ wherein:

said storage media has the form of a card.

23 109. (New) The remote control of Claim ~~46~~ wherein:

said housing is incapable of holding a removable storage media.

31 110. (New) A remote control for remotely controlling a display of information by a host device, said remote control comprising:

a structure;

remote control circuitry supported by said structure, said remote control circuitry comprising a signal transmitter capable of transmitting a wireless signal, said wireless signal controlling information displayed by said host device; and

a button physically attached to said structure, said button comprising a switch;

a switch output line connecting said switch to said remote control circuitry; and

a label formed of at least one of text and graphic content, said label being located on one of said structure and said button, said label being visually associated with said button, said label being descriptive of specific information to be supplied by a source external to the host device for display by the host device.

C
C

111. (New) The remote control of Claim 110 wherein:

said wireless signal carries a code in response to operation of said button, said code indicating a function to be performed by said host device thereby to cause display of said specific information.

32

112. (New) The remote control of Claim 111 wherein:

said code includes a button pressed code and button released code.

33

113. (New) The remote control of Claim 111 wherein:

said structure comprises a holder; and a removable storage media mounted in said holder, said removable storage media being encoded with at least said specific information described by said label.

34

114. (New) The remote control of Claim 110 wherein:

said wireless signal carries a unique number associated with said specific information.

35

115. (New) The remote control of Claim 114 wherein:

said unique number indicates an address of said specific information, when used as an index into a table of addresses.

37

~~116.~~ (New) The remote control of Claim ~~114~~ wherein:
said structure comprises a holder; and
a removable storage media mounted in said holder,
said removable storage media being encoded with at least
said specific information *Content*.

38

~~117.~~ (New) The remote control of Claim ~~116~~ wherein:
said removable storage media contains a copy of said
unique number to be compared with said unique number for
Content identifying said specific information.

39

~~118.~~ (New) A remote control for remotely controlling a
display of information by a host device, said remote control
comprising:

a structure;

remote control circuitry supported by said structure,
wherein during operation said remote control circuitry
transmits a wireless signal carrying a code that
Content identifies specific information *Content* to be retrieved from a
storage media and displayed by the host device.

40

~~119.~~ (New) The remote control of Claim ~~118~~ wherein said
storage media is a removable storage media encoded with said
specific information *Content* and mounted removably in said structure.

41

~~120.~~ (New) The remote control of Claim ~~118~~ wherein said
storage media is a remote storage media to be accessed by said
host device via Internet. --

35
